Work Term Duration	4 month work term
---------------------------	-------------------

Special Job Requirements

Hiring Preference given to Canadian Citizens and Permanent Residents. Security Clearance required. Fingerprinting is required.

Job Summary

Do you love data? Do you love financial data even more? Do you stare down complex coding challenges with courage and determination? Do you want to have a hand in modernizing a critical macroeconomic estimation system to bring it into the 21st Century? Do you want to sit atop a mountain of statistical data and help carve that mountain into a stunning piece of art?

If you have read this far and are excited about the possibilities, then consider joining us in the **Macroeconomic Accounts** where we publish statistics that help Canadians understand a complex and evolving economy and on which policymakers rely for decisions that affect all Canadians!

You'll be at the heart of our data operations and transformation initiative, ensuring legacy approaches and systems are replaced with efficient and well-documented and standardized solutions. You'll play a crucial role in bringing us into a golden age of macroeconomic statistics.

Your daily missions will include:

- **Data Wrangling:** Creating modern ways to extract and validate different data sources for use in the division to produce key estimates.
- **Coding ninja:** Implementing standardized and well-documented code in R that replaces existing legacy production jobs.
- **Workflow Mastery:** Building efficient workflows and data pipelines that minimize risk and maximize transparency.
- **Systematization Guru:** Identifying and eliminating inefficiencies and manual steps in processes so analysts have more time to, you guess it, analyze.
- **Subject-matter mastery:** Understanding your subject-matter and how it relates to your modernization work so that you can see the forest **and** the trees and produce your estimates accurately and efficiently.

The **Macroeconomic Economic Accounts Branch** at **Statistics Canada** is responsible for measuring the economic activity that takes place within Canada, the transactions between all sectors of the economy, households, businesses, governments, and non-residents, as well as the wealth of each of these sectors. This includes producing quarterly and annual estimates of Gross Domestic Product (GDP) nationally and by province and territory, measuring household incomes, consumption, savings, and wealth, producing indexes of labour productivity, and release thematic accounts on subject such as tourism and culture. The National Balance Sheet records the value of Canada's assets and liabilities and is a key source of information on household, corporate, and government net worth and indebtedness. Data is integrated from a wide variety of sources such as surveys, administrative data files, regulatory data, and private data providers to derive and analyze these key national accounting statistics.

The macroeconomic data produced by Statistics Canada are used by governments and the central bank to make informed decisions on economic policy, by investors to gauge the potential for returns in different markets, by businesses for long term planning and by international organizations for assessing economies and world financial stability.

The benefits to you the student will include but not be limited to the following:

- Experience working in a large and professional organization.
- Developing an effective balance between working independently and as part of a team.
- Practical experience in statistical methodology, compilation and analysis.
- Experience designing and implementing efficient workflows based on enterprise and custom solutions.
- Experience in the practical use of economic theory and firsthand view of how GDP and other macroeconomic statistics are compiled.
- Opportunity to learn and improve knowledge of statistical software such as R and gain experience in manipulating large data sets.

Job Responsibilities

Duties

- Support transformation work by validating the impact of new methodologies and processes, documenting legacy processes, and identifying inefficiencies.
- Help implement transformation activities by developing and validation production systems built in R and SQL.
- Conduct feasibility studies regarding new methodologies and concepts.
- Conduct coherence and revision analysis on time series.
- Regularly provide updates on production issues and proposed solutions
- Research and assess new internal and external data sources for potential use.
- Produce detailed documentation of current and new methods and all relevant findings.
- Leverage and refine procedures and tools for evaluating data quality.
- Optimize and document the production processes.

Required Skills

Key qualifications

- Experience in processing and manipulating data using various statistical and data query software programs and languages such as Microsoft Excel, R, SQL, Python, SAS, Stata, SPSS, etc.
- Experience using Microsoft Excel or other comparable spreadsheet programs (experience includes manipulating rows and columns of data, using formulas, and formatting cells).
- Knowledge of business, economics and/or finance acquired through education and/or experience.

Additional Information**Security Clearance Required****Hiring Preference - Canadian****Compensation and Benefits**

Rates of pay vary by level of education and year of study and are continually updated to remain competitive. For example, the range of university under-graduate student hourly rates range from \$18.84 to \$28.30. Compensation can vary depending on a candidate's level experience and skillset.

See the following for further information:
